PROFESSIONAL SUMMARY

Scientific software and research computing engineer with 5+ years of experience developing Python-based data pipelines and reproducible computational workflows for biomedical and scientific research. Experienced in Linux/HPC environments, SLURM, AWS S3/Ceph, Docker/Singularity/Apptainer, Kubernetes, ETL, and large-scale multi-site neuroimaging data including ABCD and HCP. Background spans research software engineering, cloud/GPU infrastructure, machine learning, and scientific data operations. Contributed to more than 30 scientific publications spanning astronomy, neuroimaging, psychiatry, and scientific software.

TECHNICAL SKILLS

Programming & Systems: Python, Bash/Shell, R, SQL, UNIX/Linux, Git/GitHub

HPC, Cloud & Containers: SLURM, AWS (S3), Ceph object storage, Docker, Singularity/Apptainer, Kubernetes, Globus, batch processing, HPC workflow design

Data Engineering: ETL pipelines, large-scale data processing, data validation and quality control, data harmonization, EHR integration, reproducible research workflows, workflow automation

Neuroimaging & Scientific Computing: NIfTI, DICOM, BIDS, FreeSurfer, FSL, Connectome Workbench, MRI segmentation, ABCD/HCP neuroimaging datasets, deep-learning inference workflows

Machine Learning & Statistics: LightGBM, scikit-learn, predictive modeling, deep learning, repeated cross-validation, calibration, bootstrap/permutation inference, SHAP, causal inference and discovery

Infrastructure & Observability: Ansible/AWX, Grafana, Prometheus, Terraform, Datadog, CI/CD (GitHub Actions, CircleCI)

RESEARCH EXPERIENCE

University of Minnesota – Department of Psychiatry & Behavioral Sciences

Dec 2025 - Present

Research Software Engineer III

Minneapolis, MN (Remote)

- Develop and maintain Python analysis pipelines for GIS-linked electronic health record data in psychiatric research.
- Build geospatial feature-engineering workflows in Python/Jupyter for county- and tract-level overlays, geocoding quality control, and FIPS recovery from external APIs.
- Build publication-grade clinical prediction workflows with LightGBM, repeated stratified cross-validation, calibration selection, and bootstrap/permutation robustness checks.
- Lead statistical result interpretation and methods reporting for manuscripts and grant submissions across interdisciplinary teams.

Masonic Institute of the Developing Brain

Jan 2021 - Apr 2024

Research Software Engineer II (promoted to III)

Minneapolis, MN (Remote)

- Developed Python and Bash workflow-management wrappers leveraging AWS S3 and Ceph object storage and SLURM high-performance computing (HPC) to standardize and scale neuroimaging data-processing pipelines, accelerating image processing up to 12×.
- Engineered a containerized deep-learning infant MRI segmentation pipeline using Docker/Singularity, achieving 600× faster processing and improved segmentation accuracy.
- Built and maintained ETL pipelines for petabyte-scale, multi-site neuroimaging datasets, including NIfTI and DICOM medical imaging data, with automated data validation, quality control, and reproducible processing workflows.
- Authored laboratory documentation and technical curriculum for neuroimaging software and HPC workflows.
- Co-designed and instructed a three-month MRI Data Processing Workshop covering Bash, Linux, SLURM, BIDS, containers, and MRI analysis workflows.
- Mentored two University of Minnesota UROP/URA students in MRI data processing and reproducible workflows using ABCD and HCP-YA datasets.
- Processed and maintained reproducible workflows for large-scale, multi-site neuroimaging studies and consortia including ABCD, BCP, HCP-Development, HCP-Young Adult, ABIDE I, and ABIDE II.
- Collaborated with academic investigators, research staff, and software developers across multi-site neuroimaging studies to troubleshoot data-processing workflows, resolve data-quality issues, and support reproducible research.

Rutgers University Astrophysics Department

May 2016 – Aug 2016

Research Assistant

New Brunswick, NJ

- Refactored legacy computational astrophysics software from IDL to Python, improving maintainability and accessibility for future research.
- Developed and optimized galactic collision simulations through parameter estimation and computational modeling.
- Performed analysis and validation of simulation outputs to evaluate model performance and scientific accuracy.
- Collaborated with faculty and researchers on computational astrophysics projects using scientific programming and numerical methods.
- Presented research findings through an oral presentation to faculty and researchers in the Rutgers Department of Physics and Astronomy and a poster presentation at the interdisciplinary Summer Research Symposium Featuring REU and RiSE Scholars.

The MINERVA Project

Jan 2015 – May 2017

Research Assistant

Missoula, MT

- Developed a Python-based photometric data reduction pipeline for detecting transiting exoplanets from time-domain FITS imaging data.
- Implemented CCD calibration workflows, including bias, dark, and flat-field correction, astrometric calibration with Astrometry.net, and aperture and differential photometry for high-precision light curve generation.
- Utilized Astropy, Photutils, and the scientific Python ecosystem to automate astronomical image processing, quality control, and photometric analysis.
- Supported exoplanet transit detection and photometric follow-up as part of the MINERVA exoplanet research program.
- Collaborated with faculty and student researchers to develop and improve scientific software supporting astronomical research.
- Presented pipeline development and research results at the 2016 Montana Space Grant Consortium Conference.
- Developed software supporting published astronomical research, including a refereed journal article and an American Astronomical Society conference abstract.

INDUSTRY EXPERIENCE

CoreWeave, Inc.

Apr 2024 - Sept 2024

Fleet Operations Engineer

Remote

- Provisioned and operated thousands of NVIDIA GPU nodes in Kubernetes using Ansible, AWX, Grafana, and Go, achieving 1-2 week onboarding and 6+ months average production uptime.
- Diagnosed and resolved hardware and software failures across thousands of GPU compute nodes supporting large-scale AI workloads.
- Partnered with 10+ teams—including networking, hardware, operations, and support—to streamline troubleshooting, accelerate incident resolution, and document SOPs and post-mortems, improving efficiency and reliability.
- Identified points in the node lifecycle where nodes were lost, implementing improvements that saved the company millions in revenue.

Calyxt

Oct 2019 - Aug 2020

Laboratory Assistant & Data Specialist

Roseville, MN

- Developed Python scripts for laboratory data tracking, quality control, and analysis reporting.

SELECTED SOFTWARE PROJECTS

Research Pipelines

GIS Analysis Pipeline

2026

University of Minnesota Department of Psychiatry & Behavioral Sciences

[Research Software]

- Developed a reproducible geospatial analysis pipeline integrating county- and tract-level social determinants of health with electronic health record data.
- Automated geocoding quality control, FIPS recovery, census tract matching, and feature engineering using Python and external GIS APIs.
- Supported publication-quality geospatial analyses and interactive visualizations for psychiatric epidemiology research.
- Integrated Census tract and county-level indices (e.g., SVI, ADI) with electronic health record data to support reproducible spatial epidemiology analyses.

Clinical Prediction Analysis Framework

2026

University of Minnesota Department of Psychiatry & Behavioral Sciences

[Research Software]

- Transformed an existing psychiatric prediction pipeline into a modular, reproducible research framework by expanding functionality, standardizing workflows, and improving usability in accordance with FAIR software principles.
- Implemented automated repeated stratified cross-validation, LightGBM modeling, probability calibration, bootstrap/permutation robustness checks, SHAP interpretation, and publication-ready statistical reporting.
- Supported multiple psychiatric prediction studies through reusable, publication-ready software workflows.

Causal Learning Pipeline

2026

University of Minnesota Department of Psychiatry & Behavioral Sciences

[Research Software]

- Built a reusable Python pipeline integrating multiple causal discovery algorithms, graph visualization, effect estimation, and reproducible statistical workflows for psychiatric EHR analyses.
- Standardized preprocessing, graph generation, and downstream statistical analyses to support consistent comparison across causal learning methods.

SLURM Wrappers

High-Performance Computing S3 and Disk SLURM-Compliant Wrappers

2021 - 2024
github.com/DCAN-Labs/SLURM_wrappers

- Developed reusable Bash/Python workflow-management wrappers for scheduling and executing scalable data-processing pipelines on SLURM HPC systems with local disk and S3/Ceph object storage.

CABINET

Container-Linking Wrapper

2022 - 2023
github.com/DCAN-Labs/CABINET

- Python-based workflow tool for linking and executing containerized neuroimaging pipelines using Docker/Singularity, supporting modular and reproducible processing across research workflows.

BIBSNet

Infant MRI Brain Segmentation Application

2022 - 2023
github.com/DCAN-Labs/BIBSnet

- Containerized deep-learning infant MRI segmentation application for reproducible neuroimaging workflows; achieved 600× faster processing and +53% segmentation accuracy.

Research Infrastructure

ABCD Study Collection 3165 Data Processing

NIH Data Archive (NDA)

2021 - 2024
collection3165.readthedocs.io

- Community dataset enabling access to petabytes of processed/unprocessed MRI data under BIDS standards.

DCAN Labs Informational Guide

Minnesota Supercomputing Institute Data Engineering Documentation

2022 - 2024
dcan-labs-informational-guide.readthedocs.io

- Comprehensive, continually-supported documentation of usage of the Minnesota Supercomputing Institute to process, analyze, and transfer MRI data.

CoreWeave Internal Documentation

CoreWeave, Inc.

2024
[Proprietary]

- Initiated and built company-wide documentation from the ground up, replacing scattered one-off documents with an organized, centralized Notion knowledge base covering terminology, SOPs, and team workflows.

Independent Projects

Waste Not

Sustainability Application

2018 - 2022
[Independent Project]

- Designed and developed a sustainability application using a nationwide, self-curated recycling database created through large-scale web scraping, data normalization, and categorization.

EDUCATION

University of Montana - Missoula, MT

Bachelor of Arts in Physics

Aug 2013 - May 2017
umt.edu/physics-astronomy

RESEARCH TEACHING & MENTORING

University of Minnesota Undergraduate Research Opportunities Program (UROP/URA)

2022

Undergraduate Research Mentor

Minneapolis, MN

- Mentored two undergraduate researchers in neuroimaging data processing.
- Trained students to process Human Connectome Project Young Adult (HCP-YA) and ABCD MRI datasets.
- Introduced reproducible workflows and quality-control procedures for large neuroimaging datasets.

Co-Instructor, MRI Data Processing Workshop

2022

Masonic Institute for the Developing Brain, University of Minnesota

Minneapolis, MN

- Co-designed and taught a three-month workshop introducing students and researchers to neuroimaging data processing and high-performance computing.
- Developed instructional materials covering Bash/Linux, SLURM, S3 storage, BIDS standards, containers, quality assurance, and reproducible MRI processing workflows.
- Held weekly office hours and provided technical mentorship to participants from diverse academic backgrounds.
- The workshop was later adapted into an official University of Minnesota credit-bearing course.

Teaching Assistant, Observational Astronomy

Aug 2016 - Dec 2016

University of Montana

Missoula, MT

- Assisted instruction for the undergraduate Observational Astronomy course.
- Supervised observing sessions and telescope operations.
- Delivered a 45-minute lecture on Python-based astronomical data reduction.
- Assisted students with programming and data analysis assignments.

LEADERSHIP & SERVICE

Founder & Organizer, Brainy Brains Seminar Series

Masonic Institute for the Developing Brain, University of Minnesota | 2022–2024

- Founded and led a weekly interdisciplinary seminar where researchers from diverse backgrounds learned and presented topics in neuroscience.
- Fostered cross-disciplinary collaboration and scientific communication across the laboratory.

Founder & Organizer, Weekly Bash Training Series

Masonic Institute for the Developing Brain, University of Minnesota | 2021–2024

- Founded and led weekly Bash and Linux training sessions for researchers and students.
- Developed instructional materials covering command-line computing, scripting, and high-performance computing workflows.
- Improved computational proficiency across the laboratory by providing hands-on technical instruction and ongoing support.

Vice President, Society of Physics Students

University of Montana | 2016–2017

Founding Member, Women in Physics

University of Montana

Selected Participant, Rutgers University Undergraduate Summer Exchange Program

Recipient, University of Montana Global Leadership Initiative Award

CONFERENCE PRESENTATIONS

Poster Presentation, Montana Space Grant Consortium Conference, 2016. Presented research on the development of a Python pipeline for Project MINERVA.

Poster Presentation, Flux Congress, 2023. Presented CABINET, a container-linking wrapper for reproducible neuroimaging workflows.

PROFESSIONAL DEVELOPMENT

Leading on All Levels, University of Minnesota (2021)

Project Management Certificate Coursework, University of Minnesota (2023)

Data Management Series, University of Minnesota (2023)
